

PRIYANKA CHOPRA

Data Analyst | MIS Specialist | Bengaluru, India | Phone: 7795340767 |

Email: choprapriya2720@gmail.com

PROFESSIONAL SUMMARY

Data Analyst with 3.5+ years of experience in fraud analytics and buyer risk operations, specializing in SQL-driven data pipelines, dashboard development (AWS QuickSight), quality metrics design, and reporting automation. Proven track record of building end-to-end analytics solutions that save 100+ hours annually, designing first-of-its-kind quality metrics for investigator performance, and migrating legacy reporting to scalable BI platforms. Adept at translating complex business requirements into actionable data products across multiple international marketplaces.

EXPERIENCE

Amazon Development Center | 2022 – Present

MIS / Data Analyst

- Designed and maintained end-to-end data pipelines using complex SQL, supporting fraud investigation and buyer risk functions across 6+ international marketplaces (US, CA, MX, UK, BR, IN)
- Built and own weekly delivery of 10+ recurring analytical reports driving data-driven decisions for 5 cross-functional teams (~200+ investigators)
- Developed interactive AWS QuickSight dashboards tracking investigator performance, quality metrics, and operational KPIs — used by leadership for weekly business reviews
- Designed and implemented first-ever quality metrics (Missed Fraud Rate, Missed Account Takeover Rate) enabling a balanced scorecard approach — complementing existing productivity metrics quality measurement
- Led migration of a critical leadership review dashboard from manual Excel to QuickSight — consolidated 5 ETL jobs into 2, eliminating ~2 days/week manual effort (100+ hours saved annually)
- Built a comprehensive investigator performance monitoring report from scratch — end-to-end design including SQL extraction, Power Query transformation, pivot structure, and payment-level decline rate tracking
- Proactively identified a 50% data gap in a compliance tracking dashboard through targeted audits; designed and delivered an optimized backup data pipeline within days, preventing misreporting
- Maintained scorecards and SIM trackers for 5 operational functions ensuring reporting accuracy and consistency
- Acted as subject matter expert for analytics logic, metrics definitions, and reporting accuracy — handling escalation requests and ad-hoc stakeholder analysis
- Created and maintained SOPs, dashboard documentation, and process guides enabling self-serve data access

PROJECTS

Weekly Business Review Dashboard — QuickSight Migration & Automation

Domain: Business Intelligence | Reporting Automation

- Owned end-to-end migration of a critical weekly leadership review slide from manual Excel to automated AWS QuickSight dashboard

- Inherited a 40%-complete SQL query — deep-dived into logic, fixed incorrect aggregations, built missing calculations, and validated against 6 months of historical data
- Consolidated 3 separate ETL jobs into 1 optimized pipeline; reduced total data pipelines from 5 to 2 (~70% maintenance reduction)
- Replicated complex conditional formatting and multi-dimensional layout in QuickSight to match exact stakeholder expectations
- **Impact:** Eliminated ~2 days/week manual effort → 100+ hours saved annually; removed human error; pattern adopted by other teams

Investigator Performance BAV Monitoring Report

Domain: Quality Analytics | Fraud Prevention

- Designed and built a comprehensive enforcement action tracking report from scratch to monitor investigator decision accuracy across multiple marketplaces
- Wrote complex SQL queries extracting order-level data including payment method, action type, investigator details, and decision outcomes
- Built complete ETL pipeline — SQL extraction → Power Query transformation → Excel pivot — enabling automated weekly refresh
- Incorporated payment instrument decline rate measurement at granular level, identifying whether investigators cancel orders unnecessarily
- **Impact:** Enabled proactive monitoring of decision accuracy — directly protecting customer experience and revenue; used as key input for performance reviews

Quality Metrics Framework — Missed Fraud & Missed ATO Rate

Domain: Fraud Analytics | Investigator Performance

- Designed and delivered two new quality metrics from scratch for a team of 100+ investigators that previously had zero quality measurement
- Identified that required data was not captured in standard database tables — independently built custom extraction logic
- Developed metric formulas: $(\text{Missed cases within 60-day window}) \div (\text{Average actions over 4-week trailing period})$ — validated against known patterns
- **Impact:** First-ever quality measurement for the team — enabled balanced performance management (speed + accuracy); supports goal-setting and dollar-value fraud reduction visibility

Automated MIS Reporting Pipeline

Domain: Reporting Automation | Data Engineering

- Automated recurring MIS reports using SQL, Power Query, and Advanced Excel — processing 50K+ rows with data cleaning and validation
- Reduced manual reporting effort by ~40% while improving data accuracy across all deliverables
- Established standardized templates and refresh mechanisms adopted across the function

SKILLS

- **Technical Skills:** SQL, Excel, Amazon QuickSight, Basic Python, Power BI
- **Data Expertise:** MIS & Operational Reporting, Dashboarding, Data Analysis, Data Cleaning & Validation

- **Domain:** Fraud Analytics, Risk Operations, Investigator Performance, Compliance Reporting, Food Compliance
- **Soft Skills:** Stakeholder Support, SME Support, Cross-functional Collaborations, Compliance, SOP creation, Team management, Training.
